person centred health care is increasingly endorsed as a key element of high quality care yet in practice it often means patient centred health care this book scrutinizes the principle of primacy of patient welfare which although deeply embedded in health professionalism is long overdue for critical analysis and debate it appears incontestable because patients have greater immediate health needs than clinicians and the patient clinician encounter is often recognized as a moral enterprise as well as a service contract however buetow argues that the implication that clinician welfare is secondary can harm clinicians patients and health system performance revaluing participants in health care as moral equals this book advocates an ethic of virtue to respect the clinician as a whole person whose self care and care from patients can benefit both parties because their moral interests intertwine and warrant equal consideration it then considers how to move from values including moral equality in health care to practice for people in their particular situations developing a genuinely inclusive concept of person centred care accepting clinicians as moral equals it also facilitates the coalescence of patient centred care and evidence based health care this reflective and provocative work develops a constructive alternative to the taken for granted principle of primacy of patient welfare it is of interest to students and academics in the health and caring sciences philosophy ethics medical humanities and health management

focusing on the mannagement of patient flows and resources in and between healthcare organizations this book will include both a theoretical framework and case studies for practical use by students

health care is not failing but succeeding expensively and we don't want to pay for it so the administrations public and private alike intervene to cut costs and herein lies the failure in this sure to be controversial book leading management thinker henry mintzberg turns his attention to reframing the management and organization of health care the problem is not management per se but a form of remote control management detached from the operations yet determined to control them it reorganizes relentlessly measures like mad promotes a heroic form of leadership favors competition where the need is for cooperation and pretends that the calling of health care should be managed like a business management in health care should be about dedicated and continuous care more than interventionist and episodic cures this professional form of organizing is the source of health care's great strength as well as its debilitating weakness in its administration as in its operations it categorizes whatever it can to apply standardized practices whose results can be measured when the categories fit this works wonderfully well the physician diagnoses appendicitis and operates some administrator ticks the appropriate box and pays but what happens when the fit fails when patients fall outside the categories or across several categories or need to be treated as people beneath the categories or when the managers and professionals pass each other like ships in the night to cope with all this mintzberg says that we need to reorganize our heads instead of our institutions he discusses how we can think differently about systems and strategies sectors and scale measurement and management leadership and organization competition and collaboration market control of health care is crass state control is crude professional control is closed we need all three in their place the overall message of mintzberg's masterful analysis is that care cure control and community have to work together within health care institutions and across them to deliver quantity quality and equality simultaneously
