the informal tone of these ten lectures by roberto harari reflects their original character as classes held at el centro de extension psicoanalitica del centro cultural general san martin buenos aires destined for a wider audience than just the psychoanalytical camp harari s work presents the lacanian endeavor without presupposition of specialized knowledge and yet without conceding intellectual subtlety harari provides an introductory display of essential themes developed in lacan s four fundamental concepts of psychoanalysis and offers his own insightful reading of the text s central ideas these ten classes sparked by the crucial seminar xi within the teaching of lacan reframe a wide range of questions in psychoanalysis for the professional in the field scholars and students across disciplines and interested lay readers harari is so at ease with lacan s oeuvre that he can dismantle and rebuild its structure so that order and logic suddenly appear inherent to lacan s way of thinking the unconscious transference repetition and the

Harari's didactic approach and his analytic style come together to bring us one step closer to understanding Lacan and one step closer to understanding ourselves.

In the existing reports on national competitiveness and rankings such as the IMD World Competitiveness Yearbook and the WEF Global Competitiveness Report, there are sizable discrepancies in the ranking order for the same countries. As a result, the reader is often confused because such an outcome creates difficulties for government officials when translating these findings into real-world policies. These discrepancies are actually due to the differences in logic and analytical models used by IMD and WEF. Therefore, in recognizing the problems and limitations of these models, this book presents the IPI model as a new approach as an extension of Michael Porter's Diamond Model. It demonstrates a robust set of methodologies as well as offers a number of key policy implications for countries around the world that wish to enhance their national competitiveness. The analytical tools used in this book can be further utilized for other units of analysis such as industries and firms. As this book provides a series of sophisticated methodologies and specific guidelines for enhancing national competitiveness, both academics and practitioners can derive useful implications from this research. Alongside the theoretical frameworks and methodologies for national competitiveness presented in this book, the special theme and focus of this third volume is the fourth industrial revolution and the emerging technologies that are relevant to corporate and national competitiveness. The discussion on the digitalization of business began as early as the 1990s, but emerging technologies such as big data, artificial intelligence, and cloud computing have only been a recent trend. Furthermore, the COVID-19 pandemic has accelerated the adoption of emerging technologies by both firms and countries. Yet despite the growing importance of emerging technologies, firms and governments seem to be lagging in effectively integrating them into their operations to address these challenges. This book explains how emerging technologies have affected firms, industries, and countries. It also welcomes discussion on how firms and countries are responding to the changing environment to enhance their competitiveness through these new technologies.
