in the earlier decades of this century we have been immersed in the long dark gloom of materialism a most important programme

for this book is to challenge this materialism and to reinstate the spiritual self as the controller of the brain

the problem of the relation between our bodies and our minds and especially of the link between brain structures and processes on the one hand and mental dispositions and events on the other is an exceedingly difficult one without pretending to be able to foresee future developments both authors of this book think it improbable that the problem will ever be solved in the sense that we shall really understand this relation we think that no more can be expected than to make a little progress here or there we have written this book in the hope that we have been able to do so we are conscious of the fact that what we have done is very conjectural and very modest we are aware of our fallibility yet we believe in the intrinsic value of every human effort to deepen our understanding of our selves and of the world we live in we believe in humanism in human rationality in human science and in other human achievements however fallible they are we are unimpressed by the recurrent intellectual fashions that belittle science and the other great human achievements an additional motive for writing this book is that we both feel that the debunking of man has gone far enough even too far it is said that we had to learn from copernicus and darwin that man's place in the universe is not so exalted or so exclusive as man once thought that may well be

sir john eccles a distinguished scientist and nobel prize winner who has devoted his scientific life to the study of the mammalian brain tells the story of how we came to be not only as animals at the end of the hominid evolutionary line but also as human persons possessed of reflective consciousness

in this book the author has collected a number of his important works and added an extensive commentary relating his ideas to those of other prominent names in the consciousness debate the view presented here is that of a convinced dualist who challenges in a lively and humorous way the prevailing materialist doctrines of many recent works also included is a new attempt to explain mind brain interaction via a quantum process affecting the release of neurotransmitters john eccles received a knighthood in 1958 and was awarded the nobel prize for medicine physiology in 1963 he has numerous other awards honouring his major contributions to neurophysiology

sir john eccles discusses the influences upon and the development of his professional life eccles outlines the early knowledge of neurobiology and research into brain mechanism the function of the brain and the importance of synaptic mechanisms are the focus of this discussion interviewed by dr christopher evans

first multi year cumulation covers six years 1965 70

died may 2 1997

instinct and revelation revolves around the hypothesis that ritual behavior and imaginative awareness in early hominids may have helped to spawn the evolution of the human brain and human consciousness using an integral perspective comparable with systems theory the book carefully interweaves fact and theory from physical and cultural anthropology psychobiology and the brain sciences psychology and to a lesser degree eastern philosophy this book breaks from tradition by discussing from a primarily anthropological perspective the origin of human consciousness within a philosophical framework that embraces precepts from human evolution evolutionary psychology the neurosciences biocultural anthropology and cultural symbolic anthropology

on the other side of life exploring the phenomenon of the near death experience is a probing examination of the nde that will influence your attitude toward life and death especially toward life supported by fascinating testimonies of people who have undergone near death experiences ms elsaesser valarino an expert in the history of the nde presents this phenomenon in a systematic and analytic way and discusses the rise of interest over the last 15 years the author then sets up a forum with distinguished investigators and scholars in the fields of psychology biology physics neurophysiology theology and philosophy these six eminent personnel propose original and scientifically stimulating hypotheses on the phenomenon of the near death experience professor kenneth ring a worldwide renowned psychologist presents a vast survey of the latest research in this field professor michel lefeuvre a philosopher provides the first extensive philosophical analysis of the nde phenomenon professors louis marie vincent a biologist regis dutheil a theoretical physicist and paul chauchard a neurophysiologist propose their own unique and highly interesting theories with respect to their own scientific fields of expertise and lord bishop jean vernette delegate of the french episcopate and advisor to the vatican puts forth the views of the catholic church the result is the first cross disciplinary scientific research into the theoretical understanding of the nde on the other side of life is an unbiased and thoughtful exchange of ideas and knowledge on the nde ms elsaesser valarino infuses this book with disarming intellectual honesty so that the reader is not unintentionally prejudiced by the controversies surrounding the nde phenomenon the book will undoubtedly leave a lasting impression on anyone willing to open up to this fascinating phenomenon
